Citi Bike Overview for July 2019 and July 2020

Avg Trip Duration July 2019 and July 2020

I chose to explore some comparisons of data between pre-COVID summertime and during COVID summertime to see what phenomena may be visualized. These visualizations indicate that both the average trip duration and the amount of bikes in use increased from July 2019 to July 2020.

Unique Bike Quantities in July 2019 vs July 2020

Comparison of User Types Pre-COVID and During COVID

User Types July 2019

User Types July 2020

Usertype

- Customer
- Subscriber

A comparison of the data from July 2019 and July 2020 identified a couple of interesting items:

1. The amount of Subscribers decreased from 2019 to 2020
2. The amount of Customers increased from 2019 to 2020

Possible reasons for this could be:

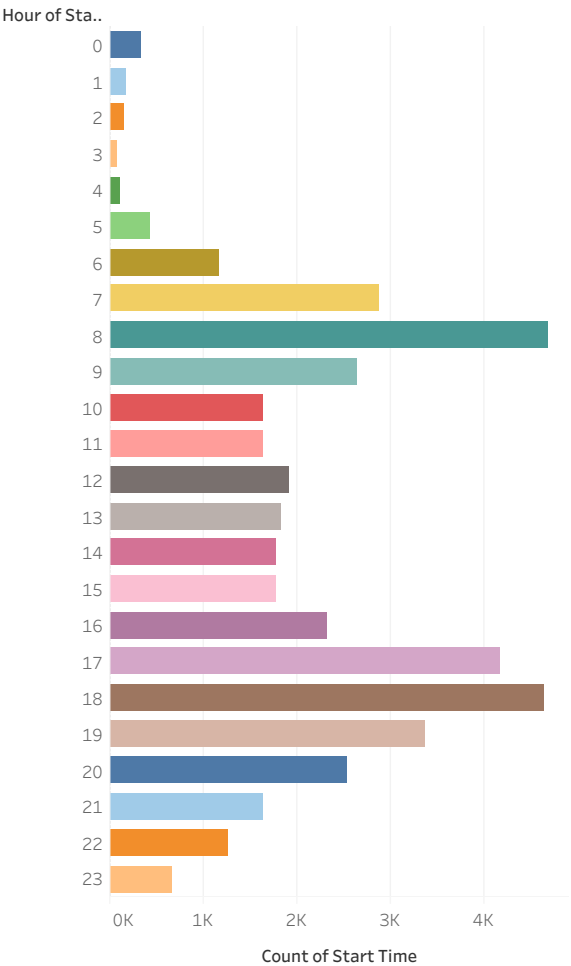

1. Subscribers were using the bikes to commute and were working remotely in 2020 due to COVID
2. People may have wanted to save on costs and switched from Subscribers to Customers for sporadic use
3. More people wanted to get outdoors during the quarantine periodically and cycle but as one time Customers

Comparison of Trip Duration by Gender Pre-COVID & During COVID

Avg Trip Duration by Gender in July 2019
(Male = 1, Female = 2)

Avg Trip Duration by Gender in July 2020
(Male = 1, Female = 2)

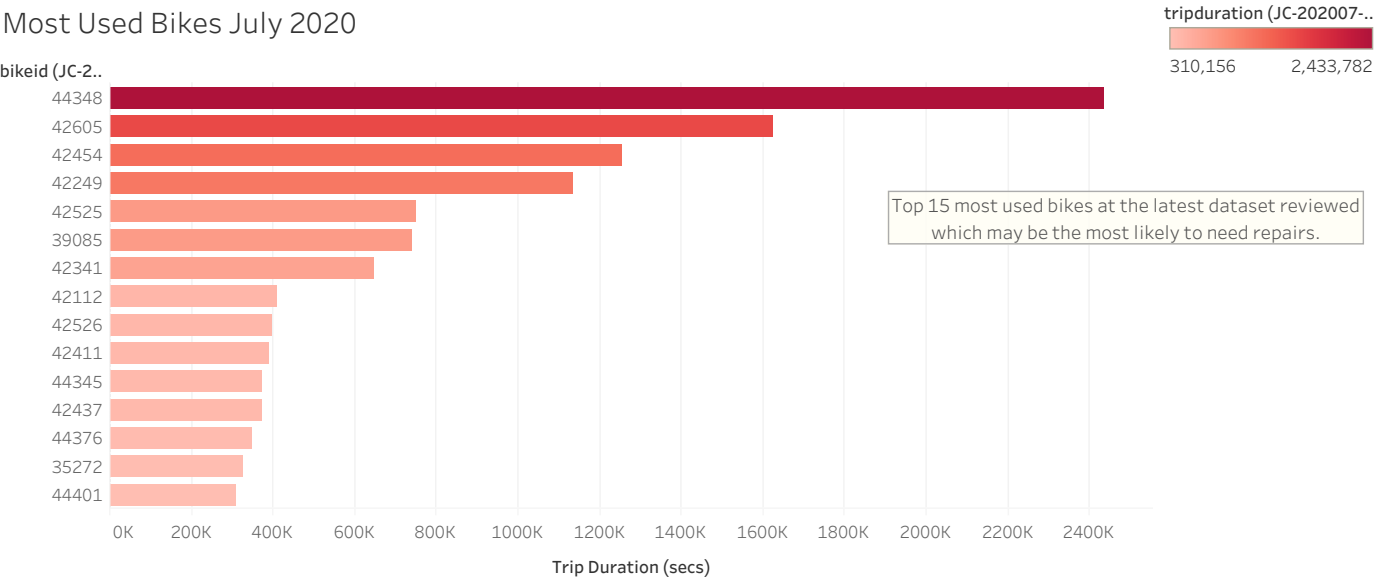

An interesting observation from 2019 to 2020 indicates a nearly twice as long trip duration for both males and females. A possible explanation is that people were enjoying the outdoors more during the pandemic.
